## FUNCTIONAL ASSESSMENT FOLLOWING ACL RECONSTRUCTION

## CRITERIA TO START PLYOMETRIC/RUNNING/AGILITY PROGRAM: (should be achieved 10-16 weeks from surgery)

- MMT at least $5 / 5$
- ROM equal to uninvolved side or at least 0-125 degrees
- Normal gait pattern at least 20 minutes without symptoms
- No pain, crepitus, edema or giving way
- Hamstring and quadriceps strength at least 70\% of uninvolved LE isokinetically
- Leg press test within 75-80\% of uninvolved LE
- Reach test with 75-80\% of uninvolved LE
- Lateral step test with $75-80 \%$ of uninvolved LE
- Land with good control and correct form on mat jumps
- Clearance from MD

## CRITERIA TO RETURN TO SPORTS:

- Completion of running and agility/plyometric program without symptoms and good form
- Isokinetic testing:
o Quadriceps strength $85-90 \%$
o Hamstrings $100 \%$ for patellar tendon graft, $85 \%$ or greater for hamstring tendon graft
o Quad torque to body weight ratio
- Males:@180 degrees/sec 65-75\%, @300 degrees/sec 45-55\%
- Females: @180 degrees/sec 50-60\%, @300 degrees/sec 35-45\%

0 Hamstring to Quadriceps ratio $65 \%$ or better

- Functional hop tests $85 \%$ compared to uninvolved LE
o Single leg hop for distance, single-leg triple crossover hop, 6 meter timed hop
- Leg press $85 \%$ of uninvolved leg
- Vertical jump $85 \%$ of uninvolved leg
- Edgren test measuring lateral change of direction looking for knee control, knee position or compensation
o Excellent $<2.0$ seconds
0 Average $<2.5$ seconds
o Needs improvement $>2.6$ seconds
- LEFT test
o Good: Males 90 seconds
Females $<25$ years old 100 seconds
Females $>25$ years old 120 seconds
o Average: Males 100 seconds
Females $<25$ years old 101 seconds
Females $>25$ years old 121 seconds
o Below average: Males 125 seconds
Females $<25$ years old 140 seconds
Females $>25$ years old 180 seconds

| Leg press | 1 rep max comparing to <br> uninvolved lower <br> extremity |  |  |  |

FUNCTIONAL TESTS:

| TEST | PARAMETER | UNIVOLVED | INVOLVED | \% DEFICIT |
| :---: | :---: | :---: | :---: | :---: |
| Excursion test forward reach | Distance in inches | Trial 1 $\qquad$ <br> Trial 2 $\qquad$ <br> Trial 3 $\qquad$ <br> Mean= $\qquad$ | Trial 1 $\qquad$ <br> Trial 2 $\qquad$ <br> Trial 3 $\qquad$ <br> Mean= $\qquad$ |  |
| Excursion test lateral reach | Distance in inches | Trial 1 $\qquad$ <br> Trial 2 $\qquad$ <br> Trial 3 $\qquad$ <br> Mean= $\qquad$ | Trial 1 $\qquad$ <br> Trial 2 $\qquad$ <br> Trial 3 $\qquad$ <br> Mean= $\qquad$ |  |
| Lateral Step test | \# of heel touches in 15 sec off a 6 inch step |  |  |  |
| LEFT test (see attached form and grading scale) | Time in seconds |  |  |  |
| Modified Edgren Test | Time in seconds |  |  |  |

SUMMARY:

## RECOMMENDATIONS:

## LEFT Test

A

Procedure:

1. Forward sprint (A-C-A)
2. Retro sprint (A-C-A)
3. Side shuffle right (A-B-C-D-A)
4. Side shuffle left (A-D-C-B-A)
5. Carioca right (A-B-C-D-A)
6. Carioca left (A-D-C-B-A)
7. Figure 8 s right (A-B-C-D-A)
8. Figure 8 s left (A-D-C-B-A)
9. 45 degree cuts right - plant outside foot (A-B-C-D-A)
10. 45 degree cuts left - plant outside foot (A-D-C-B-A)
11. 90 degree cuts right - plant outside foot (A-B-D-A)
12. 90 degree cuts left - plant outside foot (A-D-B-A)
13. Cross over 90 degree cuts right - plant inside foot (A-B-D-A)
14. Cross over 90 degree cuts left -- plant inside foot (A-D-B-A)
15. Forward sprint (A-C-A)
16. Retro sprint (A-C-A)
Norms

| Males | Females < 25 yoa | Females $>25$ yoa |
| :--- | :--- | :--- |
| 90 sec - good | $100 \mathrm{sec}-$ good | $120 \mathrm{sec}-$ good |
| $100 \mathrm{sec}-$ avg | $120 \mathrm{sec}-$ avg | $150 \mathrm{sec}-$ avg |
| $125 \mathrm{sec}-$ below avg | $140 \mathrm{sec}-$ below avg | $180 \mathrm{sec}-$ below avg |

## Modified Edgren Test

Equipment: Three cones and a stopwatch. Place two cones 12 -feet apart and one cone in the center.

In this example, the athiete starts by shuffling right from the center cone. This means he or she covers only a 6 -foot distance before changing direction and shuffling left to cone 2 . In the above example, the greater challenge will be to change direction at cone 2 after shuffling the full 12-foot distance. It is important to test the athlete starting in both directions and note any differences. Differences could be quantitative, or numbers-based (time) or qualitative, such as "awkward arm movements" or poor control of the body's center of gravity. The Edgren as "awkward arm movements" or poor
Side-Step test is performed as follows:

1. The athlete shuffles right and touches the base of the cone with his or her right hand.
2. Then the athlete shuffles left past the center cone and touches the base of cone 2 with his or her left hand.
3. Then the athlete shuffles right and finishes at the center cone (cone 3).

The athlete's foot needs to pass the lateral cones when shuffling left/right. The clock starts on his or her first move and stops when his or her foot passes the center cone at the finish. Perform this test initiating both right and left directions. The difference should not be greater than 0.2 second.

| Rate | Score |
| :--- | :--- |
| Excellent | $\leq 2.0$ seconds |
| Average | $\leq 2.5$ seconds |
| Needs Improvement | $>2.6$ seconds |
